HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. McRobbie on 11/25/2008.

The application has been amended as follows:

1. (Previously presented) A hydrophobic fumed silica treated with a cyclic dimethylsiloxane, the hydrophobic fumed silica having an M-value representing an oleophilic degree in a range of 48 to 65, a tapping bulk density of larger than 80 g/L but not larger than 130 g/L, and an n-value representing the dispersion of 3.0 to 3.5 as measured in toluene; and wherein a content of aggregated particles of not smaller than 45 μm is not larger than 200 ppm in weight ratio.

2. (Original) A hydrophobic fumed silica according to claim 1, wherein a nitrogen content is not larger than 15 ppm, and a total amount of metals and metal oxide impurities is not larger than 10 ppm calculated as metals.

3-7. (Cancelled)

2. The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest a hydrophobic fumed silica with an n-value representing the dispersion of 3.0 to 3.5 as measured in toluene. The prior art also fails to suggest a content of aggregated particles not smaller than 45 μm not being larger than 200ppm in weight ratio. Table 1 of the instant application shows that the claimed properties are unexpectedly achieved through specific means. The criticality of the use of dimethylsiloxane is shown through comparative example 3, which achieves a bulk density, M-value, and a content of aggregated particles not smaller than 45 μm within accepted values, but the n-value was not achieved due to the use of silicone oil. The Comparative examples 4 and 5 show that high contents of aggregated particles not smaller than 45 μm also appears to lead to a low n-value and thus lower dispersion. Table also shows that bulk density does not have a direct bearing on the n-value, as shown by comparative examples 1 and 2, which have tapping bulk densities of below the claimed range, but also with an n-value within the accepted range. Thus, the comparative examples show that treating agent, density and aggregated particle size limitations must be met in order to meet the n-value for dispersion. Since the prior art does not teach or suggest these properties and high dispersion values, the claims are found to be allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DIANA J. LIAO whose telephone number is (571)270-3592. The examiner can normally be reached on Monday - Friday 8:00am to 5:30pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
